THE INFLUENCE OF THE CULTURE MEDIUM ON THE GROWTH AND PROLIFERATION OF HUMAN ENDOTHELIAL CELLS

By J. R. DUNN, J. A. COOPER, AND J. R. HARRIS
Department of Pathology, University of Bristol, Bristol, U.K.

(Received 12 January 1983; accepted 10 April 1983)

Abstract Human umbilical vein endothelial cells were grown in three different culture media: Eagle's minimum essential medium (EMEM), Eagle's modified Eagle's medium (EMEM), and Dulbecco's modified Eagle's medium (DMEM). The growth rate was measured by counting the number of cells per unit area of culture dish.

The results showed that the growth rate of the cells was dependent on the type of culture medium used. The growth rate was highest in DMEM and lowest in EMEM.

The proliferation rate was measured by counting the number of cells per unit area of culture dish.

The results showed that the proliferation rate was dependent on the type of culture medium used. The proliferation rate was highest in DMEM and lowest in EMEM.

The results suggest that the type of culture medium used can affect the growth and proliferation of human endothelial cells.

Keywords: endothelial cells, culture medium, growth, proliferation.

Introduction The growth and proliferation of human endothelial cells have been studied in a variety of culture media. The results have shown that the growth rate and proliferation rate are dependent on the type of culture medium used.

The purpose of this study was to compare the growth and proliferation rates of human endothelial cells in three different culture media: Eagle's minimum essential medium (EMEM), Eagle's modified Eagle's medium (EMEM), and Dulbecco's modified Eagle's medium (DMEM).

The results show that the growth rate and proliferation rate are dependent on the type of culture medium used. The growth rate and proliferation rate are highest in DMEM and lowest in EMEM.

The results suggest that the type of culture medium used can affect the growth and proliferation of human endothelial cells.

Materials and Methods Human umbilical vein endothelial cells were obtained from the American Type Culture Collection (ATCC) and were grown in Eagle's minimum essential medium (EMEM) containing 10% fetal calf serum (FCS).

The cells were grown in T25 flasks at 37°C in a humidified atmosphere of 5% CO₂.

The growth rate was measured by counting the number of cells per unit area of culture dish.

The proliferation rate was measured by counting the number of cells per unit area of culture dish.

The results show that the growth rate and proliferation rate are dependent on the type of culture medium used.

The results suggest that the type of culture medium used can affect the growth and proliferation of human endothelial cells.

Results The growth rate of the cells was measured by counting the number of cells per unit area of culture dish.

The results show that the growth rate is highest in DMEM and lowest in EMEM.

The proliferation rate of the cells was measured by counting the number of cells per unit area of culture dish.

The results show that the proliferation rate is highest in DMEM and lowest in EMEM.

The results suggest that the type of culture medium used can affect the growth and proliferation of human endothelial cells.

Conclusion The results suggest that the type of culture medium used can affect the growth and proliferation of human endothelial cells.

EXPLANATORY NOTES

Most of the tables in this publication have been prepared entirely on a monthly basis to provide easy comparison of data. With a few exceptions, annual and quarterly figures are expressed as Monthly Averages, and these can be converted to actual totals by multiplying by 12 and 3 respectively.

For example (from page 5):

Marriages in year 1960 -

Monthly average	551
Therefore annual total = 12 X 551 =	6,612
(Actual figure is 6,607)	

Births in March quarter 1961 -

Monthly average	2,084
Therefore quarterly total = 3 X 2,084 =	6,252
(Actual figure is 6,252)	

The statistics as published can be adapted to give information in a number of different forms. For instance -

- (1) Details can be obtained for calendar or financial years as required by addition of figures for the four relevant quarters.
- (2) Progress total for the year to date can be obtained by adding totals of quarters and months.
e.g. If May figures are the latest published, total for the 5 months to May =
$$3 \times \text{monthly average of March quarter} + \text{April and May.}$$

This procedure can be used to calculate corresponding figures for the same period of the previous two years or similar information on a financial year basis.

Details of production on pages 12 - 15 are for selected items only. Particulars for several commodities of considerable importance in this State have been withheld because publication would reveal confidential information.

ABBREVIATIONS USED

Throughout this bulletin the following symbols have been used -

n.a. Not collected, not available for publication, or not applicable.

.. Nil (or less than 0.5).

p Preliminary figures.

r Revised since previous issue.

— Break in continuity of series (where drawn across a column between two consecutive figures).

A blank space in a column of figures means the figure concerned is not yet available.

When the symbol "p" or "r" is placed in the column headed "Period" (as for example on page 17) it refers to all figures on that particular line.

	30th June (Census)(a)				587,656(a)	

NOTE: For dates subsequent to the Census of 30th June 1954 the estimated population of South Australia represents the population ascertained at the Census plus natural increase and recorded net migration since the Census. As complete records of interstate migration are not available, the estimated population so derived is approximate and is subject to revision when the actual population is ascertained as a result of the Census of 30th June 1961.

Estimates for the Metropolitan Area are based on the State Estimates described above adjusted at the end of each quarter principally in accordance with the net increase in the number of dwellings in the various local government areas.

(a) Preliminary Field Count.

(a) Registrations recorded during the period.

(b) Under 1 year of age.

(c) Excess of arrivals over departures. Interstate migration relates to recorded movements by rail, sea, and air, and certain special movements by road.

(d) Changed registration procedure from January 1960 has resulted in fluctuations in subsequent periods.

NOTE: Population increases of the State can be calculated from the above figures as the sum of Natural Increases (Births minus Deaths) plus Net Migration.

For meaning of symbol n.a., see page 3.

(a) Dynamo electrical machinery and electrical equipment.

(b) Metal and semi-manufactures (basic shapes), except wire, but including structural iron and steel.

For meaning of symbols p, r, see page 3.

RETAIL SALES

The figures below relate to retail sales of goods (as distinct from services, repairs, etc.) from fixed premises at which goods are normally sold by retail to the general public. Goods sold from hotels, garages, and service stations, are included, but those from establishments such as clubs and guesthouses are excluded. Figures for the year 1956/57 are derived from a Census, but other figures are estimates based on sample surveys.

- (a) Includes groceries, butchers' meat, fresh fruit and vegetables, confectionery, soft drinks, ice cream, cakes, pastry, cooked provisions, fish, etc., but excludes some delivered milk and bread.
- (b) Includes radios, television sets and accessories, musical instruments, domestic refrigerators, etc.
- (c) Includes tobacco cigarettes etc., newspapers, books and stationery, hardware, chemists' goods, grain and produce, jewellery, office equipment, etc.
- (d) Excludes basic building materials (e.g. timber, roofing tiles, bricks, cement, etc.).
- (e) Excludes farm machinery and implements, earth moving equipment, etc.
- (f) Includes new and used motor vehicles, tractors, and parts, petrol, etc.

For meaning of symbol p, see page 3.

CONSUMER PRICE INDEX

The Consumer Price Index was first published in August 1960 and has been compiled for periods from 1948. For current statistical purposes it replaces both the "C" Series and the Interim Retail Price Indexes.

The frequency of significant changes in the pattern of household expenditure between 1949 and 1960 made it necessary to construct a series of four short-term retail price indexes. The Consumer Price Index consists of these four indexes chain-linked into a continuous series. This Index measures quarterly variations in retail prices of goods and services representing a high proportion of the expenditure of wage earner households.

The list of items is more extensive than in former indexes and includes home ownership (house price, rates, and repairs and maintenance), rents of government owned houses, major household appliances (such as refrigerators, washing machines, and television sets), private motoring, beer, and other additional items.
